ATyS M - Motorised changeover switches

ATyS M modular motorised changeover switches with positive break indication enabling on-load changeover switching of two supply sources in automatic or manual mode.

- Modular format to easily mount into standard distribution boards
- Provide rapid switching (< 90ms) excellent dynamic withstand and long life
- Auto or manual operation (*with incorporated Allen key*) padlockable in "O" position
- Supply only active during transfer, unaffected by network voltage fluctuations
- Fully compliant with IEC 60947-6-1 (*standard governing transfer switches*)

ATyS g M - Automatic changeover switches

(H) 245 x (W) 2P 235/4P 340 x (D) 74 mm

The ATyS g M switch monitors the supply from both mains and from generator. On mains failure, the switch provides an output to start generator and once the generator voltage reaches the correct level, switches over to the generator supply until mains is restored, causing the switch to change back to the mains supply and stop the generator.

Potentiometers for:	Nominal voltage configuration
	Voltage and frequency threshold configuration
	Operating cycle configuration
DIP- switches for:	50 or 60Hz, single or 3-phase
	Delay in "O" position during I-O transfer cycles
LED indication of:	Supply source availability, automatic mode, fault
External command inputs:	Manual change of supply from emergency to main source
	Remote test on-load (<i>or priority change</i>)
	1NO output relay for generator start/stop command

ATyS p M - Automatic transfer switch (digital display and settings)

As the ATyS g M above, but configurable for network/genset or network/network (*with or without priority*). Monitoring parameters configured via pushbuttons and a digital display.

- LED indicator: power on, supply status, position of switch, auto/manual/test mode, fault
- 3 configurable inputs and 3 x outputs
- 1 configurable bi-stable output relay for generator start/stop command

Accessories for all ATyS M switches

Bridging bars (plug-in) (*for incoming or outgoing side of switch*)

- Provides a common connection between switches I & II on the incoming or outgoing side of the ATyS M without reducing terminal capacity.
